## CERTIFICATE OF ANALYSIS

Product **N-Acetylgalactosamine**  
GalNAc; N-Acetyl-D-galactosamine; 2-Acetamido-2-deoxy-D-galactose

Catalog No. S-9001

Amount 111 mg

Lot No. Y0808

Chemical Formula:  $C_8H_{15}NO_6$

Formula Weight 221.2

Storage: Reconstituted sugar solutions should be stored frozen or stored at 4 °C using sodium azide (0.08%) as a preservative.

Reconstitute the sugar in 5 ml of distilled or deionized water or in 5 ml of a buffer (e.g. 10 mM HEPES buffered saline, pH 7.5-pH 8.0) or salt solution compatible with the lectin under study. **If reconstituted in 5 ml, this sugar will be 100 mM.** The sugar solution can be diluted further when appropriate or the sugar may be reconstituted with a smaller volume of water or buffer, if the sugar is soluble, to increase the final concentration.

This sugar is suitable for diluting labeled lectins to demonstrate lectin specificity by inhibiting binding or for eluting glycoconjugates from agarose-bound lectins.
