## SREBP-2 Polyclonal Antibody - Biotinylated

Item No. 22728

### Overview and Properties

|                            |  |
|----------------------------|--|
| <b>Contents:</b>           | This vial contains 50 µg of biotinylated IgG.  |
| <b>Synonyms:</b>           | SREBF2, Sterol Regulatory Element-binding Protein-2, Sterol Regulatory Element-binding Transcription Factor 2  |
| <b>Immunogen:</b>          | Synthetic peptide from an internal region of human SREBP-2 protein   |
| <b>Species Reactivity:</b> | (+) Human, mouse, and rat SREBP-2  |
| <b>Uniprot No.:</b>        | Q12772   |
| <b>Form:</b>               | Liquid   |
| <b>Storage:</b>            | -20°C (as supplied)  |
| <b>Stability:</b>          | ≥1 year  |
| <b>Storage Buffer:</b>     | PBS, pH 7.2, 50% glycerol, 0.1% BSA, and 0.02% sodium azide  |
| <b>Host:</b>               | Rabbit   |
| <b>Applications:</b>       | Immunoprecipitation (IP) and Western blot (WB); the recommended starting dilution is 1:250-500. Other applications were not tested, therefore optimal working concentration/dilution should be determined empirically. |

Lane 2: rGST-SREBP-2 (10 µl)  
Lane 3: rGST-SREBP-2 (20 µl)

WB detection of recombinant GST-SREBP-2 by SREBP-2 Polyclonal Antibody - Biotinylated (0.5 µg/ml)

WARNING  
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA  
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY  
Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

# PRODUCT INFORMATION

## Description

Cayman's SREBP-2 Polyclonal Antibody - Biotinylated detects both precursor and active forms of the protein in tissues and cells such as liver, brown fat, testis, HepG2 cells, and human fibroblast. The apparent molecular weight on SDS-PAGE may be higher than the calculated molecular weight (about 126 kDa) due to glycosylation of the protein.<sup>1</sup>

SREBPs, including SREBP-1a, SREBP-1c, and SREBP-2, constitute a family of basic helix-loop-helix (bHLH) transcription factors that play a critical role in lipid homeostasis by regulating genes involved in cholesterol and fatty acid metabolism.<sup>2</sup> SREBP-2 regulates cholesterol synthesis by activating the transcription of genes for HMG-CoA reductase and other enzymes of the cholesterol synthetic pathway.<sup>3</sup> SREBP-2 is ubiquitously detected in various tissues.<sup>4</sup> Upon cholesterol depletion, the protein is cleaved to its active forms (about 50-68 kDa) and translocated into the nucleus to stimulate transcription of genes involved in the uptake and synthesis of cholesterol.<sup>5</sup>
